AutoSense offers a bespoke online module development service. E-Learning modules can be created to assist you to induct, train or educate your employees on any subject you can imagine. Modules are simple, concise and will dramatically reduce downtime away from the job for learning. They are interactive, and a complete record of learning is automatically kept within your own learning management system.

There are two LMS solutions available to you

1. Use your own LMS

AutoSense assists to load modules and guide the process for launching and reporting of completion results

2. AutoSense Docebo

AutoSense sets up your employees on our LMS system and will manage the implementation process for you. An end to end solution.

The Process

- Scope – Autosense works with you to scope the project, understand your needs and learning objectives.
- Initial Costings – An estimate based on the initial scope is provided.
- Concept Approval – A concept approach together with content details are presented and approved.
- Final Costings – A quote is provided based on direction from the concept.
- Module Build – Modules are built and go through our internal approvals and quality assurance.
- Testing – AutoSense assist you to test the modules with a small group in your environment.
- Final Approval – Final Sign-Off.
