“

96% of all incidents and collisions are caused by driver actions and their ability to judge hazards, their knowledge, behaviour and attitude - NOT their inability to drive

”

Create training scenarios based on real-life crash data

Wouldn't it be great if you could re-create a real-life crash scenario to reduce the risk of similar crashes happening again? Now you can do just that with the AutoSense heavy vehicle simulator training. Our Crash Class can tailor scenarios based on your actual crash data, making the training sessions more informative, effective and engaging.

Our Crash Class takes a group of three drivers through the actual crash that occurred, puts them each through the crash scenario using simulation training, then discusses what could be done to avoid similar occurrences in future.

How it works

The programme is FOUR simple steps:

- **Review the Crash**
 - Look into the actual crash, what happened, what went wrong and what we can learn from it?
- **Simulator Familiarisation Drive**
 - Get used to driving in the training simulator
- **Simulator Session - Re-creation of Crash**
 - Have a go at driving in the crash scenario to experience the crash environment
- **Group Discussion with the Trainer.**
 - Collaborate with your co-workers and the trainer to embed learnings and agree on what should be done differently to avoid similar incidents occurring again.

**USE REAL-LIFE
CRASH SCENARIOS
TO KEEP YOUR
DRIVERS SAFER.
