

USING TECHNOLOGY TO DRIVE ROAD SAFETY

Autosense's mission is to improve road safety in New Zealand through clever use of technology to make commercial driver training easier to implement and manage. Autosense is also committed to finding and distributing advanced technology to protect drivers at work.

Light Vehicle Programme

The Light Vehicle Programme (LVP) is a simple three step health and safety-based driver training programme. It uses mixed media utilising online, practical evaluation and coaching. [Find out more.](#)

Online Modules

The LVP kicks off with a Driver Behaviour Questionnaire, a short 10-minute survey, which identifies areas of risk and a driving type profile. The business receives a driver score and the organisations' score, to allow further modules and targeted training. [Find out more.](#)

In-vehicle Assessments and Coaching

If drivers have been identified as medium or high risk through the initial DBQ, our in-vehicle assessments and coaching focus on assisting driver to increase awareness and reduce the risk of incident in their work driving duties. [Find out more.](#)

Specialist Skills

We offer hands-on training programmes for groups for EV and Hybrid vehicles, 4x4, and trailer towing. [Find out more.](#)

Simulation Training

Our Heavy Vehicle and Bus simulation assessments and coaching, which provide the opportunity to evaluate your drivers' full driving competency in just one hour, minimising business interruption while providing safety compliance training. We also offer a data driven Crash Class. [Find out more.](#)

Guardian by Seeing Machines

World leading technology that prevents driver fatigue and distraction related events in real time. [Find out more.](#)
